Ovarian cancer ranks 5th in cancer deaths among women, accounting for more deaths than any other cancer of the female reproductive system.

A woman’s risk of getting ovarian cancer during her lifetime is about 1 in 78.

There is no reliable screening or diagnostic test for ovarian cancer. That is why it is important to know the signs and symptoms.

If symptoms continue for two weeks, contact a doctor immediately. If cancer is suspected, a gynecologic oncologist should be consulted.
